Ops Stack: Smarter Back Office Today, AI-ready for Tomorrow

Ops Stack is an integrated platform designed to modernize securities back-office operations (trades processing, clearing, settlement, reconciliation, fails management, financial control, reference data, and reporting) into a single, cohesive ecosystem.

It unifies data, workflows, and reporting across multiple engines while remaining extensible for future AI/ML use cases.

Where We Are Today

Foundation Work – Core components for workflow orchestration, enquiry, and reporting are already taking shape

Early Integrations – Ops Stack is connecting with existing bank tools and systems to fit seamlessly into daily operations.

Active Pilots – Teams are testing AI use cases to uncover where Ops Stack adds the most value for operations

Where We're Going

Ops Stack is evolving into one platform that streamlines securities operations and prepares them for tomorrow. Your feedback will shape the journey.

Full Lifecycle Coverage – Expanding to cover the entire trade lifecycle from order capture to settlement.

AI-Powered Insights – Preparing data so forecasting, anomaly detection, and risk modeling can be applied.

Bank-Wide Integration – Strengthening links with other systems and apps in the Bank including integrations with eTask, Quartz, GBAM workspaces and more

User Empowerment – Making configuration and reporting more self-service, reducing dependence on tech
